

[Title of the Document] Abstract

[Title of the Invention]

An attribute information providing server, an attribute information providing method, and a program for the same

[Abstract]

[Object]

The invention provides a business method in which a personal information handling agent having personal information provides, in response to a request from a person, some of his personal information to a third party, thereby providing a business advantageous to both of the personal information handling agent and the person.

[Solution]

The present invention includes an attribute information providing server 10 for providing a piece of personal information from a database storing personal information on a subscriber, via a network 70; a user device 30 for extracting pieces of information from the personal information on the subscriber himself, from the attribute information providing server 10; an attribute information receiving apparatus 50 for acquiring the piece of personal information with respect to the subscriber utilizing the user device 30, from the attribute information providing server 10. The attribute information providing server 10 registers only the pieces of attribute information extracted by the user device 30 from the database, as a virtual record in the database, and provides a virtual ID serving as a key of this virtual record to the user device 30. The attribute information receiving apparatus 50 acquires the virtual ID from the user device 30, and based on this virtual ID, reads the virtual record from the attribute information providing server 10.
